

Scissor skills

Scissor skills is a vital part of fine motor development. It is a visual perceptual task that encourages the independent movement of each finger and strengthens the hand muscles.

Scissor activities can be easily prepared at home using odds and ends that you have laying around.

Cutting lines and patterns is great to improve directionality and hand eye co-ordination.

You can create a tray of items from scrap bits of paper, newspaper cuttings or even grass and leaves from outdoors to make a sensory cutting tray. Children will enjoy experimenting with scissors using these items.
